PROFESSIONAL SUMMARY

Full-stack developer with production experience owning complex systems end-to-end, from PostgreSQL schema design and REST APIs to React and Next.js frontends. Track record of measurable performance improvements and feature delivery on live platforms.

EXPERIENCE

Teaching Assistant, Full-Stack Development Bootcamp — June 2026 – Present

Research Foundation CUNY | New York, NY

- Acted as project manager for 3 student teams (3-5 members each) through 3-week capstones, assigning tickets and tracking progress, while running standups across all student teams to surface blockers, delivering 100% on-time completion across all led teams.
- Resolved technical issues for a cohort of 28 students across macOS, Windows, WSL, and native Linux, including development environment setup, shell/bash configuration (PATH, aliases, dotfiles), Git/GitHub workflow debugging, and local server troubleshooting, ensuring no student was blocked from completing coursework due to environment issues.
- Diagnosed a cross-environment connectivity issue between Windows-hosted PostgreSQL and WSL-based applications, resolving it by reconfiguring listener bindings and host-based authentication rules, then resolved the issue one-on-one for every affected student and documented the fix in a reusable guide.

Full-Stack Developer — April 2024 – January 2026

Social Content Platform (Confidential)

- Owned compliance system end-to-end: age verification, content policy enforcement, PostgreSQL schema design, live data migrations, REST APIs, and an admin dashboard to meet regulatory requirements.
- Architected a tiered subscription system expanding creators from one to 5 priced tiers for a stealth startup in scoped launch, enabling content segmentation across audience budgets.
- Integrated Stream Chat SDK and built a monetized messaging UI enabling dynamic per-user messaging rates and per-media pricing, extending revenue beyond the SDK's native capabilities.
- Migrated the platform from Plyr.js to Video.js, resolving HLS playback failures affecting ~35% of videos and eliminating a critical seek bug that crashed the site under rapid input.

EDUCATION

Borough of Manhattan Community College | New York, NY

Associate of Science in Computer Science

Coding Dojo

Full-Stack Development Certificate (Python, Java, MERN Stack)

PROJECTS

Formalytx – F1 Telemetry Explorer | [Site](#) | [Github](#)

- Reduced p50 backend latency 36x (3.9s to 107ms) under 25-concurrent load by adding four in-process LRU caches with a weakref-backed per-key lock registry, preventing duplicate FastF1 pandas DataFrame reconstruction.
- Designed a tiered Cloudflare caching strategy based on data finality (live, settling, final), cutting telemetry API response times from ~2.8s to ~170ms (16x) while preventing stale-cache issues after deployments.
- Built a full-stack F1 dashboard (Next.js/React 19, FastAPI) across 10+ typed REST endpoints, deployed on Vercel and Railway.

CERTIFICATIONS

AWS Certified Cloud Practitioner ([CLF-C02](#)) | April 2026

Microsoft Certified: Azure AI Cloud Developer Associate ([AI-200](#)) | Sep 2026

SKILLS

Languages: TypeScript, JavaScript, Python, Java, HTML5, CSS3

Frontend: React, Next.js, Tailwind CSS, Material UI, Bootstrap

Backend: Node.js, Express, FastAPI, Flask, Prisma, Encore

Databases: PostgreSQL, MySQL, MongoDB, Redis

State & Data: React Query (TanStack Query), REST APIs, tRPC

Tools & DevOps: Docker, Git/GitHub, AWS (EC2, S3, Lambda)
